Approximately 12.7 million cords of wood were harvested in 2001 from the NEFA states. That number is down from 2.5 million cords in 1997. Other states in the region harvested 2.9 million cords in 1997. The four states exported more than 3 million cords of wood in 2001. Canada is the destination for 66% of this wood (55%). Canada provided 40%, and the origin of 5% is unknown.

Volumes Harvested by Product in NY

Vermont 2001

- Hardwood sawlogs: 1,326,457,342 (MMbf)
- Softwood sawlogs: 1,022,192,342 (MMbf)
- Pulpwood: 407,435,642 (MMbf)
- Fuelwood: 37,057,452 (Mcords)
- Industrial wood: 17,121,342 (Mcords)

New Hampshire 2001

- Hardwood sawlogs: 318,367,341 (MMbf)
- Softwood sawlogs: 261,318,341 (MMbf)
- Pulpwood: 245,127,341 (MMbf)
- Fuelwood: 22,083,452 (Mcords)
- Industrial wood: 11,677,342 (Mcords)

Maine 2001

- Hardwood sawlogs: 318,367,341 (MMbf)
- Softwood sawlogs: 261,318,341 (MMbf)
- Pulpwood: 245,127,341 (MMbf)
- Fuelwood: 22,083,452 (Mcords)
- Industrial wood: 11,677,342 (Mcords)

NEFA Region Totals

- Hardwood sawlogs: 318,367,341 (MMbf)
- Softwood sawlogs: 261,318,341 (MMbf)
- Pulpwood: 245,127,341 (MMbf)
- Fuelwood: 22,083,452 (Mcords)
- Industrial wood: 11,677,342 (Mcords)

All units are in thousand cords.

Sawlogs made up 66% of exports. Pulpwood made up 20% and biomass comprised 5% of wood exported from the NEFA states. The NEFA states imported less than 2 million cords of wood in 2001, down from 3.5 million cords in 1997. Other states in the region provided 40%, and the origin of 5% is unknown.

Movement of wood between NEFA states and within the greater NEFA region is important to the economy of each state and to individual mills. Twenty-five percent of wood cut in the four states crosses a state line or international boundary before it is used.

Sawlogs are harvested to produce high-grade products, including pulpwood, biomass, and residential fuelwood. These numbers do not reflect aspen results, which are not accounted for in the data. More than 80% of the harvest is processed into sawlogs or pulpwood. The remainder is processed into fuelwood, both residential fuelwood and industrial biomass.

The four states exported more than 3 million cords of wood in 2001. Canada is the destination for 66% of this amount. The remainder is shipped to other states located in the greater NEFA region. Overseas exporting is negligible.
